

ProGrow Energy

PROGRESS®

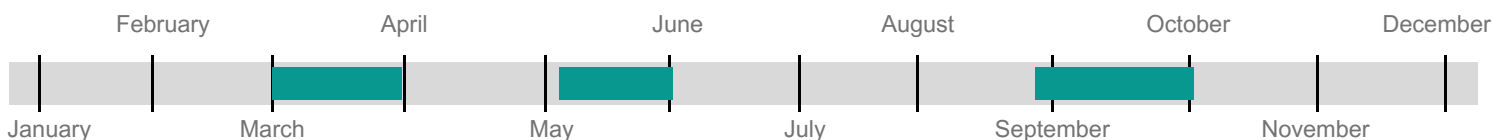

Product passport

ProGrow Energy stimulates the plant's own hormone release, which stimulates cell division in roots and shoots. The activated hormones are involved in cell growth and differentiation. The success of ProGrow Energy lies, among other things, in activating a plant's natural, organic zeatin in high concentrations. This ensures faster cell division, nutrient mobilisation and plant longevity.

Area of application: 	Aggregate state on application: 	Based on: 			
Application: 					
Binds atmospheric nitrogen: ---	FiBL-Listing: 	Duration of action:  up to 3x 0,6 l/ha		Package size:  10 l	

Area of effect:	low promotion	high promotion
Vitalisation/resilience		
Promote soil life		
Soil structure		
Root growth		
Stress and drought resistance		
Nutrient uptake		
Plant development		

Application times

Can be used in almost all crops.

Must be shaken vigorously before use as the natural product settles.
