

ProGrow Protect

PROGRESS®

Product passport

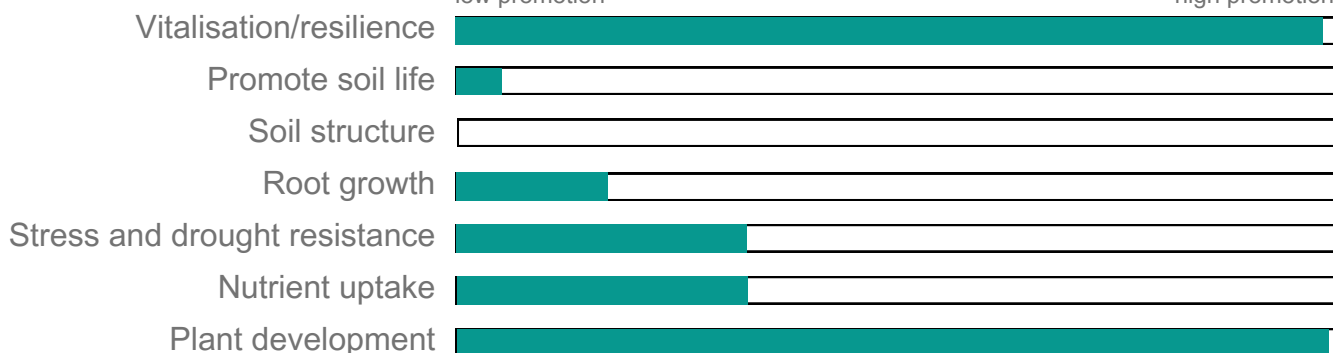

ProGrow Protect consists of spores of various *Bacillus* species and UV-stable bacteria that produce natural antibiotics and enzymes. The microbes promote plant growth and fruit production so that the full genetic potential can be achieved, even if pathogenic fungi are present. Important nutrients can be absorbed more quickly and are no longer available to harmful microbes.

Area of application:   	Aggregate state on application:  	Based on:     				
Application:      						
Binds atmospheric nitrogen: ---	FiBL-Listing: 	Duration of action:  2-4x/season 1,25 l/ha		Package size:  5 l
